No adjustments have been made to the schedule this month. The tower crane was removed from the site the first weekend in December. With the exception of the southern end of level 4 where the tower crane was just removed, all of the slab on metal deck has been poured. On the interior, the level B2 and G1 mechanical and plumbing system rough-in and door frames have been nearly completed. The window wall installation as well as exterior sheathing and framing work has continued to enclose the structure. The cooling towers have been set and are now being piped. Temporary heating will initially be fueled by propane, then converted to natural gas once permanent gas services from Washington Gas is connected in January.

- Jeffrey D. Chambers, NCARB, AIA Director of Design & Construction

Schedule Milestone Dates:

- Topping out of Structure Steel: 11/2/18
- Envelope complete: 4/5/19
- Utilities services: 5/3/19
