

# Career and Technical Education

## VPI students work with Ozobots

Students at Claremont Immersion used Ozobots as their digital companions as they practiced mastery of shapes. Students were able to program and maneuver the robots in a dynamic learning environment.

## Carlin Springs students visit Boeing Global Headquarters

A group of fifth graders from Carlin Springs embarked on an exciting field trip to Boeing's Global Headquarters as part of the DreamLearners program. Celebrating its tenth anniversary, DreamLearners was initially launched at Boeing South Carolina to immerse students in the fascinating world of STEM (Science, Technology, Engineering, and Mathematics). The program aims to ignite young minds with the wonders of science and technology through hands-on activities, teamwork, and exploration of various careers within Boeing. Students had the opportunity to delve into the realm of aerospace, advanced manufacturing, and learn firsthand the importance of STEM education. A highlight of the visit was the program's signature paper airplane activity, where students applied their learning in a fun and interactive way. This field trip not only provided a glimpse into the potential careers at Boeing but also reinforced the value of pursuing a STEM-focused education for our future innovators.
