

Executive Summary

Arlington Public Schools (APS) publishes an annual K-12 enrollment projections report covering a 10-year horizon, while maintaining steady PreK allocations for each projected year. APS uses a cohort component model for these projections, analyzing historical student enrollment data alongside county demographic data, including birth rates, migration patterns, and housing trends. The annual projections report enables staff to plan for both near- and long-term needs. In the short term, these projections assist with staffing and budgeting for the upcoming school year. In the long term, they help identify capital planning requirements.

[Table 1](#) shows that APS' K-12 enrollment increased moderately by 1.9% from Fall 2023 to Fall 2024. Growth was more pronounced at the middle and high school levels, with middle school enrollment rising by 3.5% and high school enrollment by 2.1%, as shown in [Tables 3](#) and [4](#). [Table 2](#) indicates that elementary school enrollment remained relatively stable, increasing by 0.9%. Over the three-year comparison period from Fall 2021-22 to Fall 2023-24, [Table 5](#) shows that APS' average annual growth was 0.9% at the elementary school level (Grades K-5), 1.3% at the middle school level (Grades 6-8), and 1.9% at the high school level (Grades 9-12). These tables are informative as they offer detailed insights by school level, potentially highlighting trends that may not be apparent at the division level.

Using the cohort component model, APS' K-12 enrollment is projected to grow moderately by 1.6% for the next school year, as shown in [Table 6](#). The largest growth of 3.1% is expected at the middle school level, followed by a 1.3% growth at the high school level and a 1.0% growth at the elementary school level. [Table 6](#) also includes a five-year projection for the 2029-30 school year, indicating that APS may experience moderate growth of 3.7% in K-12 enrollment, with relatively rapid growth of 7.2% at the middle school level and 11.6% at the high school level.

APS' K-12 membership enrollment on September 30, 2024, reached 27,029 students, surpassing the historical peak of 26,906 students recorded on September 30, 2019 ([Table 7](#)). [Table 7](#) also shows a projected peak K-12 enrollment of 28,037 students for the 2029-30 school year, and a smaller projected enrollment for the 2034-35 school year compared to the 2025-26 school year.

Fall 2024 10-Year, K-12 Enrollment Projections Report

Secondary level growth is projected to increase and remain steady through the 10-year horizon. The growth can be attributed to larger elementary school grade level cohorts progressing through APS, and the increase in the number of secondary students migrating into APS (i.e., students that did not progress through APS). The latter trend will need to be watched carefully and may impact future projections if migration becomes flat.

Elementary level growth is projected to be very small in the immediate years and decline quickly across the 10-year horizon. The decline in growth is attributed to fewer births occurring in Arlington County and thus, less kindergarten students. The birth trend will need to be monitored for change because small gains or drops in births can have exponential impacts on projections across a 10-year horizon.

Table 7 – Historical Fall Projections and the Fall 2024 10-Year Projections for PreK, K-12 and PreK-12

Fall Projections Process

The steps described below detail the Fall Projections Process using the three data sources as shown in Figure 1. Staff use these data sources to calculate forecasting determinants including the grade progression ratio (GPR), the birth to kindergarten (BTK) share, the birth to kindergarten (BTK) ratio, and the student generation rate (SGR). These determinants are used in the cohort component models.

Figure 1 – Projections Flow Chart

Step 1: Gather and Review Data

Staff use data from three sources to support the projection process: September 30th enrollment data (current and historical), birth data (current and historical), and Arlington County housing data, housing forecasts, and birth forecasts.

a. September 30th Enrollment Data

The official September 30th enrollment data is used to establish a spatial relationship between the enrolled students, their home address and neighborhood attendance boundary. This provides a visual representation of all students that reside within Arlington County for the current school year.

b. Birth Data

APS receives birth data from the Virginia Department of Health (VDH) and reviews the data to ensure addresses are valid within Arlington County. The valid birth data is used to form a spatial relationship with APS neighborhood attendance boundaries. APS shares the aggregated and suppressed birth data with Arlington County Government (ACG).

c. Arlington County Demographic Data

Once the County receives the aggregated and suppressed birth data, they forecast future births and provide a complete data set to APS that includes:

- Master Housing Unit Data (MHUD),
- Single Family Under Construction (SFUC),
- Annual Housing Unit Forecast (AHUF), and,
- Actual and forecasted births.

Step 2: Calculate Forecasting Determinants

Once the data sources have been received, reviewed, and spatial relationships are established (geocoded), APS begins analyzing the data to calculate four (4) forecasting determinants (ratios).

a. Grade Progression Ratio (GPR)

- The GPR uses actual enrollment data by grade level to estimate the proportion of students expected to progress to the next school level.
- The steps include calculating the GPR by grade for the current school year and then calculating the three-year average GPR based on current year, last year, and the year prior to last year's September 30th enrollment data.
- **Output:** 3-year average GPR per grade.

b. Birth to Kindergarten (BTK) Ratio and Share

- The BTK Share is calculated by taking the aggregated births five years prior to the current school year (e.g., it would be the births in 2019 for this school year) associated with each neighborhood elementary attendance boundary divided by the overall births in the County.

$$BTK\ Share = \frac{2019\ Births\ Geocoded\ to\ Neighborhood\ Elementary\ Schools}{Total\ number\ of\ 2019\ Births\ Geocoded\ to\ Arlington\ County}$$

- The BTK Ratio is determined by comparing the current September 30th kindergarten enrollment membership per neighborhood elementary attendance boundary with births from five years prior for the same neighborhood elementary attendance boundary.

$$BTK\ Ratio = \frac{2024\ Neighborhood\ Kindergarten\ Students}{2019\ Births\ Geocoded\ to\ Neighborhood\ Elementary\ Schools}$$

- 3-year averages for the BTK Share and the BTK Ratio are calculated using data that occur five, six, and seven years prior to the current enrollment year.
- **Output:** Projected Kindergartens for the 10-Year Horizon
 - Apply the BTK 3-year average share and ratio determinants to actual births for years one through four and forecasted births for years six through ten.
 - Add the number of kindergarten option students from the current September 30th membership enrollment summary.

c. Student Generate Rates (SGR)

- The SGR uses the previously geocoded September 30th enrollment data and associates it with the County's MHUD data to identify housing types with current, enrolled students. This association allows staff to summarize the student yield by housing type and neighborhood attendance boundary for immediate and biennial occupancy.
- SGR is applied to the SFUC and AHUF data provided by ACG to determine the student yield from each housing type.
- **Output:** Student Yield by housing type and neighborhood attendance boundaries.
 - The student yield is summarized by housing type and neighborhood attendance boundaries for immediate and biennial occupancies.

Step 3: Build Cohort Component Models

a. Top-Down 10-Year Cohort Component Model (referred to as Countywide)

- Include the projected Kindergartens for the 10-Year Horizon (Output from Step 2b).
- Use the GPR (Output from Step 2a).
- Use the student yield by grade (Output from Step 2c).
- Output:
 - Year 1 projection
 - Kindergarten based on the projected kindergarten and
 - Grades 1-12 are based on applying the GPR and the student yield by grade to the current year Grades K-11 actual enrollment.

- Year 2 through Year 10 projections use the same approach as Year 1 using data based on the preceding year Grades K-12 projected enrollment.

b. Bottom-Up 10-Year Cohort Component Model by School Level

Elementary School Level

The elementary school level bottom-up approach requires calculating a Grade Progression Ratio (GPR) for each elementary school following the same GPR steps above and including neighborhood and targeted transfers per grade from the current school year.

Once a GPR is determined for each elementary school the process for the Bottom-Up model follows the steps below.

- Include the projected Kindergartens for the 10-Year Horizon (Output from Step 2b).
- Use the individual elementary school GPR.
- Use the student yield by grade (Output from Step 2c).
- Output:
 - Year 1 projection
 - Kindergarten based on the projected kindergarten and
 - Grades 1-5 are based on applying the GPR and the student yield by grade to the current year Grades K-4 actual enrollment.
 - Year 2 through Year 10 projections use the same approach as Year 1 using data based on the preceding year Grades K-4 projected enrollment.

Middle School Level

The Middle School Level bottom-up approach requires calculating a Grade Progression Ratio (GPR) for

- Each middle school that includes neighborhood and targeted transfers,
- Incoming Grade 5 students enrolled in Option Schools that continue to Middle School Programs (e.g., Dual Language Immersion -DLI or Montessori), and
- Incoming Grade 5 neighborhood students for each middle school.

The individual Middle School's GPR is calculated in the same manner as the individual Elementary School's GPR that includes the targeted and neighborhood transfers.

Calculating the GPR for incoming Grade 5 students enrolled in Option Schools that continue to Middle School Programs includes:

Fall 2024 10-Year, K-12 Enrollment Projections Report

- Aggregating the Grade 5 Option Schools students that continue to Middle School Programs according to neighborhood middle school attendance boundary,
- Calculating the GPR by grade for the current school year for each Middle School Program, and
- Calculating each Middle School Program's 3-year average GPR based on current year, last year, and the year prior to last year's September 30th enrollment data.

Calculating the GPR for incoming Grade 5 neighborhood students requires looking at the first 5-year interval and the last 5-year interval separately.

- First 5-Year Interval:
 - Aggregate current students by grade level (K-4) and by middle school attendance boundary. Note, in five years, a current kindergarten student will be in grade 5.
 - Apply the countywide GPR (Output from step 2a) to generate the first five-year incoming grade 5 students.
- Last 5-Year Interval:
 - Identify the current number of kindergarten students by middle school attendance boundary.
 - Calculate the kindergarten share by middle school boundaries.
 - Use the kindergarten share per middle school to the projected kindergarten students. Note, in five years, a kindergarten student is projected to be in grade 5.
 - Use the countywide GPR (Output from step 2a) to obtain the last five-year incoming grade 5 students.

These calculations are required to feed the bottom-up model at the Middle School Level. Once the GPRs have been determined, the bottom-up model for the middle school level follows the steps below.

- Use the GPR for incoming Grade 5 neighborhood students for individual middle schools.
- Use the GPR for incoming Grade 5 students in Option Schools that continue to Middle School Programs (e.g., DLI and Montessori).
- Use the individual middle school GPR for Grades 6-7.
- Use the student yield by grade (Output from Step 2c).
- Output:
 - Year 1 projection
 - Grade 6 is based on incoming Grade 5 students.

- Grades 7 and 8 are based on the current year Grades 6 and 7 enrollments.
- Year 2 through Year 10 projections for Grade 6 are based on the incoming grade 5 students. Grades 7 and 8 are based on the preceding year grades 6 and 7 projected enrollment.

High School Level

The High School Level bottom-up approach requires calculating a Grade Progression Ratio (GPR) for

- Each high school that includes neighborhood and targeted transfers,
- Incoming Grade 8 students enrolled in Option Programs that continue to a High School Program (e.g., Dual Language Immersion -DLI), and
- Incoming Grade 8 neighborhood students for each high school.

The GPR calculation for each high school and for the incoming Grade 8 students enrolled in high school programs follow the same process as the middle school approach. Calculating the incoming Grade 8 neighborhood students requires looking at students at two different intervals below.

- First 8-Year Interval:
 - Aggregate the current students by grade level (K-7) and by high school attendance boundary. Note, in eight years, a current kindergarten student will be in Grade 8.
 - Use the countywide GPR (Output from step 2a) to generate the first eight-year incoming grade 8 students.
- Last 2-Year Interval:
 - Identify the number of current kindergartens by high school attendance boundary.
 - Calculate kindergarten share by high school boundary.
 - Use the kindergarten share per high school to the projected kindergarten students. Note, in eight years, a current kindergarten student is projected to be in grade 8.
 - Use the countywide GPR (Output from step 2a) to generate the last two-year incoming grade 8 students.

These calculations are required to feed the bottom-up model at the High School Level. Once the GPRs have been determined, the bottom-up model for the High School Level follows the steps below.

Fall 2024 10-Year, K-12 Enrollment Projections Report

- Use the GPR for incoming Grade 8 neighborhood students for individual high schools,
- Use the GPR for incoming Grade 8 high school programs,
- Use the individual high school GPR for Grades 9-11.
- Use the student yield by grade (Output from Step 2c),
- Output:
 - Year 1 projection
 - Grade 9 is based on incoming Grade 8 students.
 - Grades 10-12 are based on the current year Grades 9-11 enrollments.
 - Year 2 through Year 10 projections for Grade 9 are based on the incoming grade 8 students. Grades 10-12 are based on the preceding year grades 9-11 projected enrollment.

| Total (PreK to Grade 12) | 2,032 | 2,048 | 2,059 | 2,158 | 2,241 | 2,194 | | | | | | | | | 448 | 350 | 209 | 0 | 112 | 1,119 | 27,454 |

¹ Five-year-old Montessori students are reported in Kindergarten.
² Does not include community-based students who are registered at their home schools as dual-enrollees.
³ PreK SPED classes are in Integration Station as placeholders for the upcoming Fiscal Year. Integration Station is housed outside of APS with community PreK partners.
⁴ Schools that accept enrollment through a lottery process can also include students from the Secondary Program for Students with Autism (Grade 6 to 12) and H.S./H.L.T. students (English Learners) enter through the year (Grade 9 to 12). H-B Woodlawn is an example of such a school.
⁵ Arlington Career Center full-time students include Arlington Tech, Academic Academy, HLT Institute, and PEP. Arlington Career Center part-time students are included at their neighborhood school.
⁶ Langston and Arlington Community membership does not include students over 20 years old. The above projections do not include the scout students at Arlington Community and at Langston.
⁷ The incoming K enrollment for elementary option schools/programs are the same as the K enrollment in the 2024 Enrollment Management Plan (March 15, 2024).

All Arlington Public Schools (APS) budget and operations decisions are based on the best information available at the time. Staff and community members are reminded that funding forecasts from Arlington County and the state may change, based on many external factors. Similarly, student enrollment and projections are based on the best available information, but are also subject to change due to employment, housing and other economic factors. For these reasons, APS and the Arlington School Board may adjust future budget allocations, staffing and other operations decisions to reflect the existing community and operating landscape.

Fall 2024 10-Year, K-12 Enrollment Projections Report

¹ Five-year-old Montessori students are reported in Kindergarten.

² Does not include community-based students who are registered at their home schools as dual-enrollees.

³ PreK SPED classes are in Integration Station as placeholders for the upcoming Fiscal Year. Integration Station is housed outside of APS with community PreK partners.

⁴ Schools that accept enrollment through a lottery process can also include students from the Secondary Program for Students with Autism (Grade 6 to 12) and H.S./H.L.T. students (English Learners) enter through the year (Grade 9 to 12). H-B Woodlawn is an example of such a school.

⁵ Arlington Career Center full-time students include Arlington Tech, Academic Academy, HLT Institute, and PEP. Arlington Career Center part-time students are included at their neighborhood school.

⁶ Langston and Arlington Community membership does not include students over 20 years old. The above projections do not include the sub-students at Arlington Community and at Langston.

⁷ The incoming K enrollment for elementary option schools/programs are the same as the K enrollment in the 2024 Enrollment Management Plan (March 15, 2024).

All Arlington Public Schools (APS) budget and operations decisions are based on the best information available at the time. Staff and community members are reminded that funding forecasts from Arlington County and the state may change, based on many external factors. Similarly, student enrollment and projections are based on the best available information, but are also subject to change due to employment, housing and other economic factors. For these reasons, APS and the Arlington School Board may adjust future budget allocations, staffing and other operations decisions to reflect the existing community and operating landscape.

¹ Five-year-old Montessori students are reported in Kindergarten.

² Does not include community-based students who are registered at their home schools as dual-enrollees.

³ PreK SPED classes are in Integration Station as placeholders for the upcoming Fiscal Year. Integration Station is housed outside of APS with community PreK partners.

⁴ Schools that accept enrollment through a lottery process can also include students from the Secondary Program for Students with Autism (Grade 6 to 12) and H.S./H.L.T. students (English Learners) enter through the year (Grade 9 to 12). H-B Woodlawn is an example of such a school.

⁵ Arlington Career Center full-time students include Arlington Tech, Academic Academy, HLT Institute, and PEP. Arlington Career Center part-time students are included at their neighborhood school.

⁶ Langston and Arlington Community membership does not include students over 20 years old. The above projections do not include the split students at Arlington Community and at Langston.

⁷ The incoming K enrollment for elementary option schools/programs are the same as the K enrollment in the 2024 Enrollment Management Plan (March 15, 2024).

All Arlington Public Schools (APS) budget and operations decisions are based on the best information available at the time. Staff and community members are reminded that funding forecasts from Arlington County and the state may change, based on many external factors. Similarly, student enrollment and projections are based on the best available information, but are also subject to change due to employment, housing and other economic factors. For these reasons, APS and the Arlington School Board may adjust future budget allocations, staffing and other operations decisions to reflect the existing community and operating landscape.

Fall 2024 10-Year, K-12 Enrollment Projections Report
